

PLEXIS Direct: Real-time adjudication

Real-time adjudication app provides speed-to-value

The adage, “time is money” is especially apt when it comes to risk management and claims adjudication. Traditional claims adjudication takes up to 60 days or more to receive and settle, and even some EDI (electronic data interchange) systems take up to 10 days to finalize. But the PLEXIS Direct app can receive and adjudicate a claim in roughly the same amount of time as a credit card transaction. Best of all, providers can use the PLEXIS Direct app on their laptop and on select mobile devices to adjudicate claims in real-time.

RISK MANAGEMENT: CRITICAL SUCCESS FACTORS

For an organization to give its sales force a competitive advantage, critical success factors include capturing new clients, creating greater premiums, and maintaining renewal premiums. An actuarial secret to getting the rate increases you need while retaining all your clients is simply to provide them with better service. **PLEXIS Direct delivers three mission-critical solutions to facilitate the growth of your organization by enhancing client value and improving the business of healthcare delivery:**

- 1** Claims are adjudicated far more quickly and with greater accuracy
- 2** Healthcare providers enjoy the speed and ease of using the app on their laptop or mobile device
- 3** Direct gives administrators real-time input about the frequency of events, enabling effective risk management

ENHANCING CLIENT VALUE

PLEXIS Direct accepts transactions from healthcare providers, reformats the data, transmits the transaction to the PLEXIS core platform database, and returns results in real-time. The PLEXIS Direct app delivers claim adjudication, patient eligibility, claim repricing, claim status, and other valuable real-time adjudication abilities.

Additionally, PLEXIS Direct:

- ✓ Features advanced encryption to ensure the security of all transactions.
- ✓ Provides universal data capture from any practice management system.
- ✓ Leverages the power of Microsoft SQL, .NET, XML, and Internet Information Services (IIS) to provide a secure, stable, scalable environment for brokering claims transactions.
- ✓ Helps payers avoid costly timely payment penalties.
- ✓ Includes extensive message handling capabilities to validate transaction accuracy and delivery.
